HEALTH INFORMATION EXCHANGE (HIE) CONSENT

What is a Health Information Exchange (HIE)? A Health Information Exchange is a secure, electronic system that allows your doctors,

hospitals, and other healthcare providers to share your medical records with each other — with your permission. Think of it as a shared digital filing cabinet that your care team can access when they need information to treat you.

Why does it matter? When all of your providers have access to your records, they can give you better, safer, and more coordinated care. For example, if you visit the emergency room, the doctors there can see your medications and medical history right away.

Your participation is voluntary. You may choose to join, decline, or change your mind at any time.

Examples of information that may be shared through the HIE:

- Your diagnoses and medical conditions
- Current medications and known allergies
- Lab and test results, Imaging results (X-rays, MRIs, CT scans, etc.)
- Records of hospitalizations and procedures
- Notes from office visits with other providers

Your HIE Decision (please select one)

[ ] YES — I consent to participate in the Health Information Exchange. I allow Kathryn Amacher, MD and other treating providers in the network to view and share my health records through the HIE to support my care.

[ ] NO — I do not consent to participate in the Health Information Exchange at this time. I understand that this may limit my care team's ability to electronically access my records from other providers. I may change my decision at any time.

[ ] I have questions and would like to speak with a staff member before deciding.
